

COMMANDS FOR INSTALLING GIT TOOLS

Steps for installation :

1. Copy the github url of the particular tool
2. Go to terminal & Switch to super user (`sudo su`)
3. git clone (paste the copied github url)
4. Type (`ls`) command to check the file that you've downloaded
5. `cd` (directory name)
6. `ls`
7. If you see "requirements.txt" file then install it via following command :

`pip3 install -r requirements.txt`

* If it says python installation error then write :

`pip3 install -r requirements.txt --break-system-packages`

8. After installation if its python file (i.e .py) extension file run it by using `python3 name.py`
9. If its bash file (i.e .sh) extension file run it by using **`bash name.sh`** or .by using : **`./name.sh`**
